

EDUCATION

AT A GLANCE

- ✓ Monitor course offerings
- ✓ Simple online registration process for course attendees
- ✓ Automated updating of licensee records when trainers update course attendance and exam records

Keep Students on Track

The POSSE ABC Education module lets your agency set and monitor course syllabi, educator schedules, and student rosters to ensure that servers, establishment managers, and licensees are meeting their education requirements.

Create and Track Course Offerings

System Administrators can manage the list of course types and track which instructors, (either agency staff or third-party trainers) are authorized to provide course offerings.

Easy Course Management

Authorized Trainers can add and maintain the

list of course offerings including scheduling, setting course location and descriptions, and registering students. Trainers are responsible for recording the attendance and exam outcome, if applicable, for all students attending a course.

Online Registration

Individuals interested in attending a course can register via the POSSE ABC public portal, identifying the date and location for the class of interest. Individuals who are also Licensees may manage the staff roster for who is currently employed at each licensed location, which links to student records (e.g., Server/Seller training).
